EDUCATION

Bachelor of Science

Computer Science

University of Wisconsin Green

Bay

September 2020 - December 2024

Green Bay, WI

RELEVANT COURSES

Advanced Software Design

Data Structures

Operating Systems Using Linux

Artificial Intelligence

Theory of Algorithms

Theory of Programming Languages

Introduction to Mobile Platforms and

Apps

Advanced Object-Oriented Design

SKILLS

Java

HTML5/CSS/JavaScript

Python

Linux

C++

GitHub

WORK EXPERIENCE

Stocker

von Stiehl Winery

April 2017 - current / Algoma, WI

- Receiving and Stocking Inventory
- Inventory Management
- Warehouse Maintenance
- Order Fulfillment
- Seasonal Support

PROJECTS

Twisted Blackjack (Java)

April 2023

- Helped develop a Java-based Blackjack game with a competitive multiplayer twist, where two players compete against each other and the dealer
- Designed a health mechanic where players lose health upon losing bets, and the game ends when a player's health reaches zero
- Utilized object-oriented programming principles to structure the game logic, player actions, and dealer behavior

Bank Management System (C++)

December 2023

- Helped develop a Bank Management System in C++ to simulate banking operations, including withdrawing and depositing funds that runs in a console
- Implemented a secure manager account feature to add or remove users, ensuring controlled access to administrative functions
- Developed functions and applied core programming concepts such as file handling, data structures, and conditional logic to ensure efficient system functionality

Fortune Teller Program (Java, Python)

April 2024

- Developed a Fortune-Teller application in Java, offering users three unique ways to receive fortunes: A fortune teller's guidance, Tarot card readings, and an interactive "Ponder the Orb" feature
- Integrated a Python-based local server using an older ChatGPT model to generate dynamic and engaging fortune text for the fortune teller's responses
- Demonstrated strong full-stack development skills by combining Java for the main application with Python for local text generation and server functionality

Movie Recommendation System (Python)

December 2024

- Developed a Movie Recommendation System in Python using Jupyter Notebook to suggest movies based on user input
- Implemented multiple recommendation methods, including filtering by ratings, genres, movie descriptions, and cast/crew details
- Leveraged data analysis and manipulation libraries like Pandas and NumPy to preprocess and analyze dataset features
